

NZ ETS Post-1989 Forest-Land Screening - Gisborne District

Automated spatial triage of 5,712 LCDB v6 land-cover mapping units against the subset of forest-land criteria testable from open data

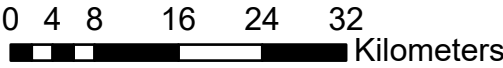

Inset: R-02 width-method disagreement

lcdb1000453434: a 30 m erosion core survives in 6 separate fragments (2 larger than 500 m²), yet its equivalent-rectangle width is 22.8 m. One of 381 units where the two R-02 proxies disagree; all are quarantined for assessor review, not rejected.

Screening disposition

-  Gisborne District boundary
-  Candidate for assessor review (3,069)
-  Excluded - project conservation policy (200)
-  Quarantined - rule failure (2,443)
-  Public conservation land (DOC)

SCREENING / TRIAGE ONLY - NOT AN ELIGIBILITY DETERMINATION
